

MODEL 3HP | INSTRUMENTATION SERIES

3-WAY THREADED STANDARD PORT BALL VALVES

Flow-Tek's Instrumentation Series 3-Way ball valves offer rugged reliability for high pressure and instrumentation applications. The valves feature three piece bodies designed for flexibility of installation and ease of maintenance. Model 3HP is constructed as standard with 316 stainless steel bodies manufactured to NACE specifications. Other body materials are available such as Duplex SS, Hastelloy, Monel and Titanium. All bodies are marked with a heat code for full material traceability.

A floating ball design provides a positive, bubble tight shut off with smooth quarter turn operation at low operating

torque. Additional advantages of the Instrumentation Series include a choice of lever or pointer handles, travel limit stop pins and replaceable seats and seals. Locking kits which secure the valve in a desired position are also available.

Safety features include an internally loaded blow-out proof stem and end connections that are pinned to prevent inadvertent loosening or disassembly.

Pressure Rating	End Connections
5,000 psi	Standard: NPT Optional: Compression Fittings

Pinned End Connections

Actuator Mounting: Valves with actuator mounting to ISO 5211 specifications and live loading are also available as an option.

1/4" to 1"

For Optional Panel Mounting:
Verify the mounting dimensions before manufacturing mounting hardware.
